You’re a homebuilder, not an electrician. You love crafting your airplane, and can’t wait to fly now that it has wings. A Quick Panel cuts hundreds of hours off your avionics system installation with a complete, professionally engineered panel, delivered ready-to-install in your homebuilt aircraft.

Quick Panels are currently available for RV-7, RV-8, RV-9, RV-10, Glasair Sportsman, CubCrafters, Kitfox, and Sonex aircraft. If you fly something else, give us a call. We’ll work with you to tailor a Quick Panel to your aircraft and mission.
VFR Quick Panels Include:

- Touchscreen PFD
- Touchscreen MFD
- ADAHRS
- COM Radio
- WAAS GPS
- Mode-S Transponder
- ADS-B Traffic and Weather

From $36,995

**IFR AF-5600 GLASAIR SPORTSMAN**
From $36,295
Included with every Quick Panel, our ADVANCED Control Module saves the builder hundreds of hours in wiring, crimping, troubleshooting and frustration.

- 22 Channels of Circuit Protection
- Panel Dimmer Controller
- Flap Controller with Positioning
- Trim Controller
- Wig Wag Landing Light Controller
- SV Network Hub
- EFIS ARINC Interface
- Panel Switch Interface
1. Inquire if there is a Quick Panel available for your aircraft.
   We have already built Quick Panels for RV-7, RV-8, RV-9, RV-10, RV-14, Glasair Sportsman,
   CubCrafters, Kitfox, and Sonex aircraft. If you fly something else, give us a call. We can likely
   develop a Quick Panel for YOUR airplane.

2. Choose IFR or VFR configuration.
   IFR configurations typically add a certified GPS/NAV/COM - usually an Avidyne IFD540 - and
   redundant flight instrumentation.

3. Choose SkyView or Advanced displays and
   Customize your panel with our experts.
   Behind the scenes, both systems use the same components and are both part of the Dynon
   family. We’ll work with you to tailor your Quick Panel to your needs.

4. Sit back and relax while we engineer, craft, and configure
   your panel.
   We’re sure you have other things to finish on your airplane. So, let us save you 100s of hours in
   wiring and configuration.

5. Install your Quick Panel.
   Your panel is delivered to your door, ready to install into your aircraft. Connect to power, pitot/
   static, autopilot servos, and any other systems in your aircraft.

6. Go Fly... and share some pictures!
